Miscreation? Jun 14 2021 Meet Natalia, the girl with the golden-brown eyes and a predisposition for science and music. She discovers the choice to follow her father comes at a cost. Meanwhile, her mother's hiding a genetic timebomb that's just about to go off. Then there's the underground cadre that wants to expose the government secrets of the Genome Age. But the question is: what do you do with Miscreations—the genetic experiments gone wrong? Especially when they have powers you don't understand... (POD version)

Amole, One More Time Oct 19 2021 For more than 20 years, Gene Amole's columns have been delighting readers of the "Rocky Mountain News". This book features a selection of those well-loved columns—his first new collection in more than ten years.

The Gene Feb 03 2023 The #1 NEW YORK TIMES Bestseller The basis for the PBS Ken Burns Documentary *The Gene: An Intimate History* Now includes an excerpt from Siddhartha Mukherjee's new book *Song of the Cell!* From the Pulitzer Prize-winning author of *The Emperor of All Maladies*—a fascinating history of the gene and “a magisterial account of how human minds have laboriously, ingeniously picked apart what makes us tick” (Elle). “Sid Mukherjee has the uncanny ability to bring together science, history, and the future in a way that is understandable and riveting, guiding us through both time and the mystery of life itself.” —Ken Burns “Dr. Siddhartha Mukherjee dazzled readers with his Pulitzer Prize-winning *The Emperor of All Maladies* in 2010. That achievement was evidently just a warm-up for his virtuoso performance in *The Gene: An Intimate History*, in which he braids science, history, and memoir into an epic with all the range and biblical thunder of *Paradise Lost*” (The New York Times). In this biography Mukherjee brings to life the quest to understand human heredity and its surprising influence on our lives, personalities, identities, fates, and choices. “Mukherjee expresses abstract intellectual ideas through emotional stories... [and] swaddles his medical rigor with rhapsodic tenderness, surprising vulnerability, and occasional flashes of pure poetry” (The Washington Post). Throughout, the story of Mukherjee's own family—with its tragic and bewildering history of mental illness—reminds us of the questions that hang over our ability to translate the science of genetics from the laboratory to the real world. In riveting and dramatic prose, he describes the centuries of research and experimentation—from Aristotle and Pythagoras to Mendel and Darwin, from Boveri and Morgan to Crick, Watson and Franklin, all the way through the revolutionary twenty-first century innovators who mapped the human genome. “A fascinating and often sobering history of how humans came to understand the roles of genes in making us who we are—and what our manipulation of those genes might mean for our future” (Milwaukee Journal-Sentinel), *The Gene* is the revelatory and magisterial history of a scientific idea coming to life, the most crucial science of our time, intimately explained by a master. “The Gene is a book we all should read” (USA TODAY).

The Ultraverse Chronicles Mar 24 2022 In a universe where superheroes are very real, a scientist, a geneticist, will try to unlock the secret behind The Alpha Gene, a gene directly responsible for supers and what they can do. However, an accident will mutate the gene into what become known as The Omega Gene. Now, Dr. Falcon and his assistant are the world's first super-mutants. Whenever someone steals his research, however, he creates a new super-mutant, Prowl: a super-mutant with incredible superhuman strength, and the ability to heal nearly instantaneously.

Sparks of Liberty Feb 08 2021 The story of Radio Liberty, an American station broadcasting to the Soviet Union during the Cold War. Operating from Munich, the station became the voice of the opposition, featuring such dissidents as Solzhenitsyn. The author is a former director.

The Family Gene Nov 07 2020 A riveting medical mystery about a young woman's quest to uncover the truth about her likely fatal genetic disorder that opens a window onto the exploding field of genomic medicine When Joselin Linder was in her twenties her legs suddenly started to swell. After years of misdiagnoses, doctors discovered a deadly blockage in her liver. Struggling to find an explanation for her

unusual condition, Joselin compared the medical chart of her father—who had died from a mysterious disease, ten years prior—with that of an uncle who had died under similarly strange circumstances. Delving further into the past, she discovered that her great-grandmother had displayed symptoms similar to hers before her death. Clearly, this was more than a fluke. Setting out to build a more complete picture of the illness that haunted her family, Joselin approached Dr. Christine Seidman, the head of a group of world-class genetic researchers at Harvard Medical School, for help. Dr. Seidman had been working on her family’s case for twenty years and had finally confirmed that fourteen of Joselin’s relatives carried something called a private mutation—meaning that they were the first known people to experience the baffling symptoms of a brand new genetic mutation. Here, Joselin tells the story of their gene: the lives it claimed and the future of genomic medicine with the potential to save those that remain. Digging into family records and medical history, conducting interviews with relatives and friends, and reflecting on her own experiences with the Harvard doctor, Joselin pieces together the lineage of this deadly gene to write a gripping and unforgettable exploration of family, history, and love. A compelling chronicle of survival and perseverance, *The Family Gene* is an important story of a young woman reckoning with her father’s death, her own mortality, and her ethical obligations to herself and those closest to her.

Altered Fates Jan 22 2022 A look at the scientists racing to develop gene therapy and their patients.

One Day May 26 2022 “One of the 50 Best Nonfiction Books of the Last 25 Years”—Slate On New Year’s Day 2013, two-time Pulitzer Prize winner Gene Weingarten asked three strangers to, literally, pluck a day, month, and year from a hat. That day—chosen completely at random—turned out to be Sunday, December 28, 1986, by any conventional measure a most ordinary day. Weingarten spent the next six years proving that there is no such thing. That Sunday between Christmas and New Year’s turned out to be filled with comedy, tragedy, implausible irony, cosmic comeuppances, kindness, cruelty, heroism, cowardice, genius, idiocy, prejudice, selflessness, coincidence, and startling moments of human connection, along with evocative foreshadowing of momentous events yet to come. Lives were lost. Lives were saved. Lives were altered in overwhelming ways. Many of these events never made it into the news; they were private dramas in the lives of private people. They were utterly compelling. *One Day* asks and answers the question of whether there is even such a thing as “ordinary” when we are talking about how we all lurch and stumble our way through the daily, daunting challenge of being human.

A Stitch in Time Sep 17 2021 *A Stitch in Time*, written by the voice of the Astros, Gene Elston, chronicles the extraordinary and exciting highlights of baseball from the early days of the game until today. A wealth of baseball facts, insight, and rare photos that only a lifetime involvement in the game can provide.

Michael O'Halloran Nov 19 2021 How is this book unique? Font adjustments & biography included Unabridged (100% Original content) Illustrated About Michael O'Halloran by Gene Stratton-Porter This early 20th-century classic chronicles the adventures of an orphaned newspaper boy in his "hand-to-hand scuffle" with life in a midwestern metropolis. Gene Stratton-Porter's faith in the healing power of nature is also apparent, in a lovingly depicted tamarack swamp set near the city. This is the story of a spunky 10 year old orphan boy named Michael. It starts with Michael living alone, hiding from the Children's home, working as a newsboy, and following the rules his Mother gave him before she died. He is quite precocious and meets several interesting people in his day to day activities. Eventually he happens on a poor, dirty, little crippled girl wailing because her abusive granny has died and the Children's Home will be coming after her. Michael manages to get her to his home, clean her up, and claim her as his family. A lot of responsibility for a 10 year old, which he soon discovers and plots to remedy. This is quite an enjoyable tale.

Human Gene Mutation Sep 05 2020 Within the last decade, much progress has been made in the analysis and diagnosis of human inherited disease, and in the characterization of the underlying genes and their associated pathological lesions.

Dragon Hoops Aug 29 2022 In his latest graphic novel, *Dragon Hoops*, New York Times bestselling author Gene Luen Yang turns the spotlight on his life, his family, and the high school where he teaches. Gene understands stories—comic book stories, in particular. Big action. Bigger thrills. And the hero always wins. But Gene doesn’t get sports. As a kid, his friends called him “Stick” and every basketball game he played ended in pain. He lost interest in basketball long ago, but at the high school where he now teaches, it’s all anyone can talk about. The men’s varsity team, the Dragons, is having a phenomenal season that’s been decades in the making. Each victory brings them closer to their ultimate goal: the California State Championships. Once Gene gets to know these young all-stars, he realizes that their story is just as thrilling

as anything he's seen on a comic book page. He knows he has to follow this epic to its end. What he doesn't know yet is that this season is not only going to change the Dragons's lives, but his own life as well.

One of a Kind Jul 28 2022 Conley chronicles the amazing career world of champion two-sport professional athlete Gene Conley, who was able to win world championships in Major League Baseball and the National Basketball Association in the late 1950s and early 1960s.

Gene Jockeys Apr 24 2022 This book captures that heady, fleeting moment when a biologist could expect to do great science through the private sector and be rewarded with both wealth and scientific acclaim.

I Remember Gospel Sep 29 2022 "Gene, you are going to go places you never dreamt of seeing and you will minister to people you never could imagine you would reach. Don't be afraid. I will be your seal of approval and, as long as you yield to My will, I will be with you. " This was the word given to an unlikely recipient, a self-conscious young boy who was awaiting such a word to bring direction to his future. That prophetic message would begin a journey which has spanned over forty years and taken him from storefront churches and concert halls in the sixties, as part of one of America's first integrated Gospel groups, to ministry opportunities (to this day) both in the United States and abroad. Within the pages of this book, Gene, chronicles that journey in a frank, intimate and inspiring manner. He shares as an encouragement to his readers, the way God took a willing ordinary vessel and used it in unimaginable ways.

The Seventh Mountain Dec 21 2021 An engrossing fantasy novel that will entertain young readers and engage the adult mind alike. Gene Curtis's *The Seventh Mountain* reflects the influence of JK Rowling, Orson Scott Card and C.S. Lewis. Readers will find familiar plot devices, but also unique twists and a rich allegorical subtext. A letter in the family Bible leads Mark Young, a twelve-year-old boy, to a mysterious staff hidden beneath a sacred mountain. The next thing Mark knows, he is a student at the Seventh Mountain, an academy for Magi in training. Mark must not only endure the physical and mental rigors of the school, but fight off the bullies and outwit other students in a place where practical jokes and mock-assassinations are not only tolerated but encouraged. But a darker force awaits. Joined by his closest friends, Mark must find within himself the strength and faith to fulfill his destiny and challenge the dark forces that lurk beneath *The Seventh Mountain*.

The Shadow Hero 1 Jun 26 2022 *The Shadow Hero* is based on the adventures of the Green Turtle, who solved crimes and fought injustice just like any other comic hero of the 1940s. But this mysterious masked crusader was hiding something more than your run-of-the-mill secret identity . . . The Green Turtle was the first Asian American superhero. Now, New York Times–bestselling author Gene Luen Yang has created a riveting, hilarious, and moving origin story for the Green Turtle. With artwork by the unmatched Sonny Liew, this gorgeous graphic novel about heroism and heritage is also a loving tribute to the long, rich tradition of American superhero comics.

All In Dec 09 2020 Gene Chizik was the coach that nobody wanted . . . until he accomplished more than anyone ever dreamed. *All In* chronicles the remarkable journey of Gene Chizik, who in two short years went from being the much-maligned 5–19 coach of the Iowa State Cyclones to the undefeated AP SEC Coach of the Year of the 2010 national champion Auburn Tigers. Coach Chizik shares never-before-told stories about his controversial head coaching career—from his highly contentious departure from Iowa State and his heavily criticized appointment at Auburn to his historic 2010 championship run and all the unexpected twists, turns, tragedies, and triumphs along the way. As he recounts his journey, he opens up about the pivotal role his faith has played in his life and career, and he shares his time-tested secrets to success, both on and off the field. *All In* is an inspirational must-read for football fans everywhere.

Essentials of Genetics Jun 02 2020 *Essentials of Genetics* derived from Klug and Cummings' highly acclaimed *Concepts of Genetics*, 6/e (2000), the authors capture students' interest with up-to-date coverage of cutting-edge topics and research. *Essentials 3/E* will help students connect the science of genetics to the issues of today through interesting and thought-provoking applications. *Essentials 3/E* presents a balanced coverage of both classical and modern genetics. Courses can be found in biology, zoology, agriculture, and health science.

The Code Breaker Mar 12 2021 A Best Book of 2021 by Bloomberg BusinessWeek, Time, and The Washington Post The bestselling author of *Leonardo da Vinci* and *Steve Jobs* returns with a “compelling” (The Washington Post) account of how Nobel Prize winner Jennifer Doudna and her colleagues launched a revolution that will allow us to cure diseases, fend off viruses, and have healthier babies. When Jennifer Doudna was in sixth grade, she came home one day to find that her dad had left a paperback titled *The*

Double Helix on her bed. She put it aside, thinking it was one of those detective tales she loved. When she read it on a rainy Saturday, she discovered she was right, in a way. As she sped through the pages, she became enthralled by the intense drama behind the competition to discover the code of life. Even though her high school counselor told her girls didn't become scientists, she decided she would. Driven by a passion to understand how nature works and to turn discoveries into inventions, she would help to make what the book's author, James Watson, told her was the most important biological advance since his codiscovery of the structure of DNA. She and her collaborators turned a curiosity of nature into an invention that will transform the human race: an easy-to-use tool that can edit DNA. Known as CRISPR, it opened a brave new world of medical miracles and moral questions. The development of CRISPR and the race to create vaccines for coronavirus will hasten our transition to the next great innovation revolution. The past half-century has been a digital age, based on the microchip, computer, and internet. Now we are entering a life-science revolution. Children who study digital coding will be joined by those who study genetic code. Should we use our new evolution-hacking powers to make us less susceptible to viruses? What a wonderful boon that would be! And what about preventing depression? Hmmm... Should we allow parents, if they can afford it, to enhance the height or muscles or IQ of their kids? After helping to discover CRISPR, Doudna became a leader in wrestling with these moral issues and, with her collaborator Emmanuelle Charpentier, won the Nobel Prize in 2020. Her story is an "enthraling detective story" (Oprah Daily) that involves the most profound wonders of nature, from the origins of life to the future of our species.

The Cooking Gene Dec 29 2019 2018 James Beard Foundation Book of the Year | 2018 James Beard Foundation Book Award Winner in Writing | Nominee for the 2018 Hurston/Wright Legacy Award in Nonfiction | #75 on The Root100 2018 A renowned culinary historian offers a fresh perspective on our most divisive cultural issue, race, in this illuminating memoir of Southern cuisine and food culture that traces his ancestry—both black and white—through food, from Africa to America and slavery to freedom. Southern food is integral to the American culinary tradition, yet the question of who "owns" it is one of the most provocative touch points in our ongoing struggles over race. In this unique memoir, culinary historian Michael W. Twitty takes readers to the white-hot center of this fight, tracing the roots of his own family and the charged politics surrounding the origins of soul food, barbecue, and all Southern cuisine. From the tobacco and rice farms of colonial times to plantation kitchens and backbreaking cotton fields, Twitty tells his family story through the foods that enabled his ancestors' survival across three centuries. He sifts through stories, recipes, genetic tests, and historical documents, and travels from Civil War battlefields in Virginia to synagogues in Alabama to Black-owned organic farms in Georgia. As he takes us through his ancestral culinary history, Twitty suggests that healing may come from embracing the discomfort of the Southern past. Along the way, he reveals a truth that is more than skin deep—the power that food has to bring the kin of the enslaved and their former slaveholders to the table, where they can discover the real America together.

The God Gene Chronicles May 06 2023 What would you do if you found out that everything you knew about your life was a lie? What if all the myths and folklore you grew up with—deities pitting good against evil, the avatar whose coming foretells the end of the world—turned out to be reality? What if there really was a boy who could bridge the worlds of gods and humans because he carries the rare biological marker called "the god gene"? And what if, one day, you find out that you are that boy? Based on Hindu mythology, its pantheon of deities including Vishnu and Shiva, and the Dashavatara narrative, and inspired by the Underworld series, *The God Gene Chronicles* is an alternate world where myth and lore lay the foundations of history. A world where gods walk freely on an earth overrun by thugs. A world that waits desperately for the last incarnation of Vishnu to return to earth as the protector. A world about to be changed by a long dormant marker in the blood of a rare few—the god gene, where heaven and earth intersect in the form of a boy who may just be the saviour the world has been waiting for.

The Immortal Chronicles Jul 04 2020 Adam has a lot of stories to tell, which is fair given he's been alive for over sixty-thousand years. All of the stories are interesting, many involve alcohol, and five are collected for the first time in *The Immortal Chronicles*! The books in this collection take Adam from the Barbary Coast of the 1500's, to England at the turn of the 19th century, Vienna of 1815, Chicago in the 1930's, and 1950's New York. He spends time with pirates and assassins, a succubus, a shape-shifting monster, a madman who can see the future, and Santa Claus. *The Immortal Chronicles* is an ongoing series of novellas from Adam, the

star narrator of the Immortal Novel trilogy (IMMORTAL, HELLENIC IMMORTAL and IMMORTAL AT THE EDGE OF THE WORLD.) Collected here for the first time: IMMORTAL AT SEA, HARD-BOILED IMMORTAL, IMMORTAL AND THE MADMAN, YULETIDE IMMORTAL and REGENCY IMMORTAL. Catch up with Adam now!

Advances in Genetics Jan 10 2021 Volume 32 of *Advances in Genetics: Incorporating Molecular Genetic Medicine* focuses on important and fast moving subjects in modern human genetics and medicine. This volume also marks the new collaboration with Associate Editors Dr. Theodore Friedmann and Dr. Francesco Giannelli. Chapter 1 considers the potential effectiveness and consequences of gene therapy on subjects over time. Chapter 2 discusses recent research on Gaucher's disease, the first disorder to demonstrate the clinical benefits of enzyme replacement therapy. Chapter 3 describes current findings on diabetes, a disease difficult to conquer due to its variety and its genetic and environmental causes. The major forms of hemophilia and the need for alternative therapies are discussed in Chapter 4. Chapter 5 presents hypercholesterolemia as a model for understanding the causes and treatments of human diseases on a molecular level. Chapter 6 probes the basic genetic defects behind phenylketonuria, as well as the possibilities for genetic correction. Chapter 7 covers the fascinating terminal structures of human chromosomes. In the Foreword to Volume 32, Drs. Friedmann and Giannelli suggest: "Progress toward a thorough characterization of the human genome is stunningly rapid and exceeding many of its earliest expectations. Disease-related genes will be falling from the skies faster than we can understand them, and mechanisms responsible for the pathogenesis of disease will be illuminated more quickly and readily than ever before." With comprehensive and timely reviews, *Advances in Genetics incorporating Molecular Genetic Medicine* offers with every volume further insight into this expanding field of medicine, supplementing the continued expert coverage of all other areas of genetics pioneered by *Advances in Genetics*. Key Features * Presents technical and historical overviews of molecular biology applied to disease detection, diagnosis, and treatment * Chronicles the continuing explosion of knowledge in molecular genetic medicine by highlighting current approaches to understanding human illness * Documents the revolution in human and molecular genetics leading to a new field of medicine * Volume 32 marks new collaboration with Associate Editors Dr. Theodore Friedmann and Dr. Francesco Giannelli

The Forever Fix Oct 07 2020 Fascinating narrative science that explores the next frontier in medicine and genetics through the very personal prism of the children and families gene therapy has touched. Eight-year-old Corey Haas was nearly blind from a hereditary disorder when his sight was restored through a delicate procedure that made medical history. Like something from a science fiction novel, doctors carefully injected viruses bearing healing genes into the DNA of Corey's eyes—a few days later, Corey could see, his sight restored by gene therapy. *THE FOREVER FIX* is the first book to tell the fascinating story of gene therapy: how it works, the science behind it, how patients (mostly children) have been helped and harmed, and how scientists learned from each trial to get one step closer to its immense promise, the promise of a "forever fix," - a cure that, by fixing problems at their genetic root, does not need further surgery or medication. Told through the voices of the children and families who have been the inspiration, experimental subjects, and successes of genetic science, *THE FOREVER FIX* is compelling and engaging narrative science that tells explores the future of medicine as well as the families and scientists who are breaking new ground every day. *The Language of Genes* Dec 01 2022 In this book, the author explores the meanings and explodes the myths of human genetics, offering up an extraordinary picture of what we are, what we were, and what we may become.

Who Wrote the Book of Life? Feb 29 2020 This is a detailed history of one of the most important and dramatic episodes in modern science, recounted from the novel vantage point of the dawn of the information age and its impact on representations of nature, heredity, and society. Drawing on archives, published sources, and interviews, the author situates work on the genetic code (1953-70) within the history of life science, the rise of communication technosciences (cybernetics, information theory, and computers), the intersection of molecular biology with cryptanalysis and linguistics, and the social history of postwar Europe and the United States. Kay draws out the historical specificity in the process by which the central biological problem of DNA-based protein synthesis came to be metaphorically represented as an information code and a writing technology—and consequently as a “book of life.” This molecular writing and reading is part of the cultural production of the Nuclear Age, its power amplified by the centuries-old theistic resonance of the “book of life” metaphor. Yet, as the author points out, these are just metaphors: analogies, not ontologies.

Necessary and productive as they have been, they have their epistemological limitations. Deploying analyses of language, cryptology, and information theory, the author persuasively argues that, technically speaking, the genetic code is not a code, DNA is not a language, and the genome is not an information system (objections voiced by experts as early as the 1950s). Thus her historical reconstruction and analyses also serve as a critique of the new genomic biopower. Genomic textuality has become a fact of life, a metaphor literalized, she claims, as human genome projects promise new levels of control over life through the meta-level of information: control of the word (the DNA sequences) and its editing and rewriting. But the author shows how the humbling limits of these scriptural metaphors also pose a challenge to the textual and material mastery of the genomic "book of life."

Divine Life Mar 04 2023 The most graphic depiction of the second coming that you are likely to read until you see it with your own eyes. The Return centers on giving glory to Jesus Christ in His second coming, and is unique in that it continues telling the story of what happens after His coming.

The God Gene Oct 31 2022 Rick Hayden and Laura Fanning of Panacea return to encounter another mindbending scientific scenario in, *The God Gene*, the new thriller by F. Paul Wilson. F. Paul Wilson is the winner of the Career Achievement in Thriller Fiction in the 2017 RT Reviewers' Choice Best Book Awards. Rick's brother, Keith, a prominent zoologist at NYU, walks out of his office one day and disappears. The only clue they have are his brother's book, which mentions "the God Gene." A million or so years ago, a gene designated hsa-mir-3998 appeared as if by magic from the junk DNA of the hominids who eventually evolved into *Homo sapiens*. It became a key player in brain development—specifically creativity—and laymen started calling it "the God Gene." Keith had been tracking this gene through the evolutionary tree, and was excited by an odd blue-eyed primate he brought back from East Africa. But immediately after running the creature's genetic code, he destroyed all the results and vanished. Rick and Laura's search takes them to an uncharted island in the Mozambique Channel, home of the dapis—blue-eyed primates whose DNA hides a world-shattering secret. In a globe-spanning mixture of science, mystery and adventure reminiscent of Michael Crichton, *The God Gene* takes you to the edge of evolutionary theory and beyond...way beyond. The ICE Sequence Series 1. Panacea 2. *The God Gene* At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

First Fruit May 02 2020 "Amid the storm of controversy raging over insect-resistant corn, Roundup-Ready soybeans, and other "Frankenfoods," few people I rise and fall of the Flavr Savr tomato, the first genetically ominous demise. In the process she explains how genes are added engineering.

The Q Chronicles Jan 28 2020 Of all the myriad beings who inhabit our galaxy, none are as enigmatic (and as entertaining) as the omnipotent cosmic trickster who calls himself Q. Since the very beginning of "Star Trek: The Next Generation(R)" he has confounded Starfleet captains from one end of the Milky Way to another. Sometimes a playful mischief maker, sometimes a deadly threat to all humanity, Q is nothing if not unpredictable. Starfleet has maintained an extensive record of all Q's bizarre manifestations, and now so can you. Here, painstakingly compiled, are the original scripts for each of Q's unforgettable encounters with the Federation. From his memorable first appearance on the "Starship Enterprise(TM)" to his single visit to "Deep Space Nine(TM)" and his ongoing flirtations with Captain Kathryn Janeway of the "Starship Voyager(TM), *The Q Chronicles*" provides authentic transcripts of over a decade's worth of quintessential fun and games.

Hard-Boiled Immortal Feb 20 2022 I knew she was bad news the minute she walked into the bar. She was a redhead. I always had a thing for redheads. One in particular, actually. She was dead, but that didn't mean I wasn't holding my breath for a second or two every time I saw another girl with red hair. This one was very much alive, and once she walked in she was also the life of the room. Men I'd been serving drinks to for years, who smiled so little if you told me they had no teeth I would've believed it, lit up like a kid meeting the world's cutest bunny. The girl's name was Lucy and she was there to see a buddy of mine, who we'll call

Al. That wasn't his name, but Al turned out to be kind of important, and this story is kind of embarrassing for him, so even though he's not around any more let's stick with Al. The redhead was either going to get him killed, or she was going to get me killed. I could tell right away. Call it gut instinct if you want, but I'm alive today because I know what bad news looks like as soon as I see it. Also, she was a succubus. --Adam the immortal The year was 1942, there was a war on, and Adam was having a lot of trouble avoiding the attention of some important people. The kind of people with guns, and ways to make a fella disappear. He was caught somewhere between the mob and the government, and the only way out involved a red-haired dame he was pretty sure he couldn't trust. In *Hard-Boiled Immortal*, the second adventure in *The Immortal Chronicles* Adam has to figure out how to survive wartime from the quiet corner of a bar in Chicago... if he can.

Immortal at Sea May 14 2021 "if you've been around for long enough, you're bound to experience a few unpleasant things: fires, earthquakes, avalanches, volcanoes, sometimes all on the same afternoon. Boats, I can tell you from first-hand experience, sink. A lot. Sometimes it's because whoever made the boat for you made a crappy boat. Maybe you made a crappy boat. There is also the occasional psychotically malevolent storm that doesn't care how well designed your boat is. When you encounter something like that, and the thing you were relying upon to keep you alive ends up sinking, you really want to know you're not too far from the safety of solid ground. Oh, and here's another thing to worry about when you're in a boat: sea serpents." --Adam the immortal Adam's adventures on the high seas have taken him from the Mediterranean to the Barbary Coast, and if there's one thing he learned, it's that maybe the sea is trying to tell him to stay on dry land. In *Immortal At Sea*, the first adventure in *The Immortal Chronicles* Adam talks about what it took to make it back to shore safely, and why it's a bad idea to sail on a gilded ship.

Advanced Genetic Analysis Jul 16 2021 *Advanced Genetic Analysis* explores the question "How can the principles of genetics be used as analytical tools to solve biological problems?" Drawing on the latest experimental tools, including microarrays, RNAi, and bioinformatics approaches, it provides a state-of-the-art review of the field, but in a truly student-friendly manner.

The Dog Who Could Fly Aug 17 2021 "A thoroughly enjoyable story of heroism and true friendship" (Publishers Weekly, starred review), this *Sunday Times* top ten bestseller is the true account of a German shepherd who was adopted by the Royal Air Force during World War II, flying countless combat missions and surviving everything from crash-landings to parachute bailouts—ultimately saving the life of his owner and dearest friend. In the winter of 1939 in the cold snow of no-man's-land, two loners met and began an extraordinary journey that would turn them into lifelong friends. One was an orphaned puppy, abandoned by his owners as they fled Nazi forces. The other was a different kind of lost soul—a Czech airman bound for the Royal Air Force and the country that he would come to call home. Airman Robert Bozdech stumbled across the tiny German shepherd—whom he named Ant—after being shot down on a daring mission over enemy lines. Unable to desert the puppy, Robert hid Ant inside his jacket as he escaped. In the months that followed, the pair would save each other's lives countless times as they flew together with RAF Bomber Command. Finally grounded after being injured on a flight mission, Ant refused to abandon his duty, waiting patiently beside the runway for his master's return from every sortie, and refusing food and sleep until they were reunited. By the end of the war, Robert and Ant had become true war heroes, and Ant was justly awarded the Dickin Medal, the "Animal VC." With beautiful vintage black-and-white photos of Robert and Ant, *The Dog Who Could Fly* is a deeply moving story of loyalty in the face of adversity and the unshakable bond between a man and his best friend.
