from the year 2003 in the subject Business economics -  
Investment and Finance, grade: 2,0 (B), University of Applied  
Sciences Essen (MBA International Financial Management  
Program), course: Strategic Management Accounting, 8 entries  
in the bibliography, language: English, abstract: Borealis is the  
outcome of a merger of the petrochemical divisions of Statoil  
Norway and Neste Oy Finland in 1994. It is a fully integrated  
the biggest European polyolefins producer with production  
in different European countries and its head office in  
Copenhagen / Denmark. Directly after the merger Borealis had to  
create a common budget for the combined entity. The separate  
budgets of Statoil and Neste in the past had the traditional  
purposes of budgets: make planning and controlling easier for  
management. The head of budgeting of Neste Oy became the  
corporate control of Borealis and he was willing to leave the  
traditional budgeting behind and replace it by a new and  
innovative management steering approach with different  
purposes. During a period of three years he abandoned the  
traditional budgeting process and replaced it by a conglomerate  
of different management tools. This case describes the reasons  
and how it came to the different budgeting approach and what  
kind of concept was implemented instead of the traditional  
budgeting process. It also includes the hopes, which the Borealis  
management had with the different approach and the results.  
In the following shall be discussed what the advantages and  
disadvantages of the new financial and steering system are  
compared with the abandoned budgeting system either from a  
theoretical and practical point of view. For this discussion

traditional budgeting process is described in the first place includes the budgeting process within Borealis and in theory. Then the new approach of Borealis is described in part 3. In part 4, the advantages will be discussed and in part 5 the disadvantages will be figured out and discussed. In the last part, a conclusion will be done, which will try to judge if the new financial and steering approach within Borealis does really achieve its expected purposes compared with the abandoned budgeting system.

Activity-Based Costing and Its Later Development Into Activity-Based Budgeting and Management Accounting  
Sep 28 2022 Seminar paper  
from the year 2008 in the subject Business economics - Accounting and Taxes, grade: 1.3, University of the West of England, Bristol (Bristol Business School (University of the West of England)), course: Internes Rechnungswesen/ Management Accounting, 15 entries in the bibliography, language: English  
abstract: Every accounting student of the past sixty years has learned about inventory costing- a bookkeeping procedure that manufacturing accountants follow to separate the product cost expense of an accounting period from the cost of manufacturing product inventories at the end of the period. (Johnson and Kaplan, 1991, p. 130) This technique of valuing inventory should, although often practiced, not be used for managerial decision making though. It oversimplifies the consumption of overhead costs by products, services and customers and therefore leads to distorted cost information. Activity-based costing (ABC), developed by single manufacturing firms in the early 1980s, seems to provide more reliable information. The second part of this work describes the concept of ABC by summarizing the arguments of two pioneers in this field. In their book "Relevance Lost: The Rise and Fall of Management Accounting", first

published in 1987, H. Thomas Johnson and Robert S. Kaplan (1991) examine the traditions of management accounting, describe possible improvements. In part three the development of ABC in the last 20 years are described by reviewing a choice of important literature. Part four then shows the impact that ABC had on implementing companies. The conclusion, part five, contains an assessment of the used literature and an evaluation of whether the critic of traditional management accounting has been overcome by ABC.

They address the ability to explain the budget - which actually entails explaining the collection, the services, and the process in place for managing fiscal resources - a necessary skill for any reference librarian faced with looming budget cuts. Providing quality services on a limited budget is also explored. The contributors provide helpful essays on convincing the parent agency to provide adequate support, setting goals and priorities, generating revenue, and more.

Controlling Cost Growth of NASA Earth and Space Science

Missions Oct 06 2020 Cost and schedule growth is a problem experienced by many types of projects in many fields of endeavor. Based on prior studies of cost growth in NASA and Department of Defense projects, this book identifies specific causes of cost growth associated with NASA Earth and space science missions and provides guidance on how NASA can overcome these specific problems. The recommendations in this book focus on changing NASA policies that would directly reduce or eliminate the cost growth of Earth and space science missions. Large cost growth is a concern for Earth and space science missions, and it can be a concern for other missions as well. If the cost growth is large enough, it can create liquidity problems for NASA's Science Mission Directorate that in turn cause cost profile changes, development delays that amplify the overall cost growth for concurrent and/or pending missions. Addressing cost growth through the allocation of artificially high reserves is an inefficient use of resources because it unnecessarily diminishes the probability of planned flights. The most efficient use of resources is to establish realistic budgets and reserves and effective management processes that maximize the likelihood that mission costs will not exceed reserves. NASA is already taking action to reduce cost growth; additional steps, as recommended herein, will help to improve NASA's mission planning process and achieve the goal of ensuring frequent mission opportunities for NASA Earth and space science.
