World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than

disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress. The girls and boys come away enthusiastic and full of inspiration on how to respond to "What do you want to be when you grow up?" Author Lois Melbourne, of the My Future Story series, inspires readers to identify and explore their passions, and shape their own future stories. As an entrepreneur and CEO of a talent management software company, Lois Melbourne loved her career, and especially loved spending time connecting with people, mentoring, and selling software. Now on to a new passion, Melbourne has created My Future Story, a book series for students exploring their exciting and almost limitless career opportunities. Growing up in rural Missouri, Melbourne experienced firsthand the lack of career education and direction. Working with people around the world and in every industry, she saw the powerful impact of people choosing careers they really enjoyed. This is the inspiration for My Future Story. He also highlights why we must sometimes change our attitudes, which can be hard. Over the past few decades, the economic prospects for workers possessing relatively few skills have worsened as the demand for skills in the labor market has increased. Even in jobs that might be categorized as low-skilled, workers require a diverse set of skills to succeed. Many of these skills can only be obtained through schooling or job training. This is why workers lacking skills find it difficult to attain a foothold in the labor market and why employers have difficulty filling low-skilled jobs. While it was previously assumed that the supply of workers able to fill low-skilled jobs exceeded the demand, this book reveals that the labor market for low-skilled workers actually operates quite differently. Maxwell presents the results of

her groundbreaking survey of 405 employers, which queried them about jobs requiring no more than a high school education and no more than one year of work experience. These data allow her to establish the link between skills and low-skilled jobs and to reveal the current state of the labor market facing low-skilled workers. The data also highlights the knowledge and skills that employers require in low-skilled jobs and the abilities that individuals who apply for those jobs bring to the table. Overall, the employers' responses allow Maxwell to make the following five key points: (1) Low-skilled jobs require skills. Low-skilled jobs are not no-skilled jobs. While individuals do not have to have a high level of credentials to apply for low-skilled jobs, once they are hired, employers emphasize that they must possess the requisite skills to succeed in their jobs. Among them are the so-called new basic skills: English, math, problem-solving, and communication skills. In addition, appropriate workplace behavior and the ability to follow instructions are important, and physical abilities and mechanical skills are also required, often at levels more intense than at other jobs; (2) Shortages of appropriately skilled workers in low-skilled jobs exist, even when labor markets are slack. Close to 60 percent of firms in this study report great difficulty--one-fourth of them had extreme difficulty--finding qualified workers for low-skilled jobs even when unemployment rates exceed 7.0 percent; (3) Skills are rewarded in the labor market for workers in low-skilled jobs. Low-skilled jobs requiring skills with a high relative demand in the local labor market (I.E., skills in short supply) carry increased occupational wages; (4) Low skilled jobs offer promotional opportunities. Firms report that over 90 percent of entry-level low-skilled jobs have promotional opportunities, as long as workers are willing and able to expand their skill sets. Firms also construct pipelines of appropriately skilled workers by hiring entry-level workers with skills needed in the position above entry level; and (5) Hiring requirements in low-skilled jobs are relaxed in tight labor markets. Firms match recruiting and screening methods to the skills needed in the low-skilled jobs. As labor markets loosen, these firms use less extensive recruiting methods but adopt more intensive screening methods. This suggests that, during loose labor markets, firms sort through a greater number of applicants in order to uncover workers with the skill sets needed in the job. Maxwell also defines low-skilled jobs, identifies the populations who fill these jobs and the economic realities facing them, and offers policy solutions aimed at facilitating the career development of low-skilled individuals. These solutions include building skills while attending public schools and while attending publicly-funded employment and training programs. They also include increasing the demand for low-skilled workers and refining the nation's workforce development programs to better steer individuals into jobs providing economic self-sufficiency. The following chapters are contained in this book: (1) Low Skilled Jobs: The Reality behind the Popular Perceptions; (2) Local Labor Markets and Low-Skilled Jobs: Theory and Data; (3) How Skills Matter; (4) Recruiting and Screening Workers in Low-Skilled Positions; (5) Skills, Promotions, and Low-Skilled Positions; (6) Labor Markets for Workers in Low-Skilled Positions: How Can Policies Help Workers? It is clear that although the human resource management field has been drastically affected by global competition over the last twenty years, most of the research and publications in the field are geared to providing corporations with an understanding of their business environment. This book takes an entirely different approach by looking at the job and career markets from the point of view of individuals who are searching for new strategies to find, develop and manage their careers in a global environment. Not only does it provide the individual with the tools necessary to evaluate various domestic and international career markets, but it also presents strategies to help them package and market their skills and competencies at home and abroad. With the help of this vital guidebook to the global job market, readers will:

- Learn how to research national markets to spot new career opportunities
- Find information on dynamic regions and companies where careers are flourishing
- Find out about professional & skill certifications that help with global employment
- Learn how to build and mobilize personal and professional networks
- Learn about international oriented business sectors and career opportunities

An argument for reimagining skill in a way that can extend economic opportunity to workers at the bottom of the labor market. America has a jobs problem--not enough well-paying jobs to go around and not enough clear pathways leading to them. Skill development is critical for addressing this employment crisis, but there are many unresolved questions about who has skill, how it is attained, and whose responsibility it is to build skills over time. In this book, Nichola Lowe tells the stories of pioneering workforce intermediaries--nonprofits, unions, community colleges--that harness this ambiguity around skill to extend economic opportunity to workers at the bottom of the labor market. There are many different types of careers for those interested in working with animals. On the local level,

workers can groom and train household pets, walk dogs, run a pet store, or work in an animal shelter. Other opportunities exist in monitoring and managing wildlife, working with farm animals, and advocating for humane treatment of animals. Employment of veterinarians in particular is projected to increase by 33 percent through 2018, a much faster than average rate of growth, according to the Bureau of Labor Statistics. Career Opportunities Working with Animals describes more than 80 occupations in such animal-related fields as veterinary medicine; shelters, sanctuaries, and refuges; veterinary offices/hospitals/clinics; animal advocacy organizations; care and conservation of wildlife; zoos and aquariums; creative careers; pet care, training, and grooming; pet food, pet supply, and pet merchandise stores; and horses. Most books on the subject of work focus on the increased amount of time Americans spend on the job. Peter Meiksins and Peter Whalley address the counter-trend, examining the difficult path traversed by people who choose to work less than the standard, forty-hour week. Their fascinating investigation of alternative work arrangements speaks directly to the concerns of all workers who must balance career with other commitments. Through interviews with technical professionals from a wide range of employment settings, Putting Work in Its Place refutes the popular myth of the customized work schedule as inevitably a "mommy-track" or a return to traditionalism among women. Most of these workers—male and female, young and old—remain strongly committed to their jobs, but wish to combine work with other activities they value just as highly. This can mean family for some, but for others encompasses community service or various avocations. By viewing their work arrangements in the longer term, and not as short-term expedients, these professionals are challenging the accepted view of time requirements for careers in organizations. They are also helping to shape a new agenda for the future of the workplace: to transform their individual successes into a normal practice of customized work time.
