The SAGE Guide to Writing in Criminal Justice Research Methods equips students with transferable writing skills that can be applied across the field of criminal justice—both academically and professionally. M. Allen and Steven Hougland interweave professional and applied writing, academic writing, and information literacy, with the result being a stronger, more confident writer, researcher, and student in criminal justice. Focused on teaching students how to write in the academic setting while introducing them to a number of other writing tools specific to research methods, such as writing literature reviews, abstracts, proposals, and more. The perfect companion for any criminal justice research methods course, this brief text focuses on key topics that will benefit students in their classes and in the field. The study of decisions in the criminal justice process provides a useful focus for the examination of many fundamental aspects of criminal justice. These decisions are not always highly visible. They are made, ordinarily, within wide areas of discretion. The aims of the decisions are not always clear, and, indeed, the principal objectives of these decisions are often the subject of much debate. Usually they are not guided by explicit decision policies. Often the participants are unable to verbalize the basis for the selection of decision alternatives. Adequate information for the decisions is usually unavailable. Rarely can the decisions be demonstrated to be rational. By a rational decision we mean "that decision among those possible for the decisionmaker which, in the light of the information available, maximizes the probability of the achievement of the purpose of the

decisionmaker in that specific and particular case" (Wilkins, 1974a: 70; also 1969). This definition, which stems from statistical decision theory, points to three fundamental characteristics of decisions. First, it is assumed that a choice of possible decisions (or, more precisely, of possible alternatives) is available. If only one choice is possible, there is no decision problem, and the question of rationality does not arise. Usually, of course, there will be a choice, even if the alternative is to decide not to decide—a choice that, of course, often has profound consequences.
