Optimization and Optimal Control Nov 01 2020 This volume gives the latest advances in optimization and optimal control which are the main part of applied mathematics. It covers various topics of optimization, optimal control and operations research.

Illustrations of Orchidaceous Plants. With Notes and Prefatory

Remarks by John Lindley Dec 22 2019

The Statesman's Year-book Jan 23 2020

S. Chand's ISC Mathematics Class-XII May 27 2020 S Chand's ISC Mathematics is structured according to the latest syllabus as per the new CISCE(Council for the Indian School Certificate Examinations), New Delhi, for ISC students taking classes XI & XII examinations.

Network-Oriented Modeling Mar 29 2023 This book presents a new approach that can be applied to complex, integrated individual and social human processes. It provides an alternative means of addressing complexity, better suited for its purpose than and effectively complementing traditional strategies involving isolation and separation assumptions. Network-oriented modeling allows high-level cognitive, affective and social models in the form of (cyclic) graphs to be constructed, which can be automatically transformed into executable simulation models. The modeling format used makes it easy to take into account theories and findings about complex cognitive and social processes, which often involve dynamics based on interrelating cycles. Accordingly, it makes it possible to address complex phenomena such as the integration of emotions within cognitive processes of all kinds, of internal simulations of the mental processes of others, and of social phenomena such as shared understandings and collective actions. A variety of sample models – including those for ownership of actions, fear and dreaming, the integration of emotions in joint decision-making based on empathic understanding, and evolving social

networks – illustrate the potential of the approach. Dedicated software is available to support building models in a conceptual or graphical manner, transforming them into an executable format and performing simulation experiments. The majority of the material presented has been used and positively evaluated by undergraduate and graduate students and researchers in the cognitive, social and AI domains. Given its detailed coverage, the book is ideally suited as an introduction for graduate and undergraduate students in many different multidisciplinary fields involving cognitive, affective, social, biological, and neuroscience domains.

The Communications Act of 1979 Aug 30 2020

Parliamentary Papers Feb 04 2021

GESA Jun 20 2022 A training program to free teachers from stereotypical race and gender roles and expectations.

BEAMS 2000 Sep 23 2022 This conference was about the generation and application of high power beams of electrons and ions by pulsed power technology. Pulsed power compresses electrical energy in both space and time to efficiently create devices that have both high power and high energy content. This electrical energy can be converted into high power beams of electrons, ions and to generate high power microwave sources. High power electron beams are used to power microwave sources, for radiographing dense objects, for materials modification, or for various biological sterilization applications. High power ion beams are being explored for making new high-strength materials, nanopowders, and other commercial applications. Topics include: pulsed power technology, pulsed power switches, radiography, electron beams, electron beam applications, ion beam physics and applications, theory and modeling, as well as beams from ultra-intense lasers.

Practice, Practice Theory and Theology Mar 17 2022 How might practice theories and engagement with practice contribute to and advance theological study of religion and religious life and practices? This volume explores and discusses how theological

engagement with practice, theoretically as well as empirically, might profit from theories of practice developed in disciplines such as philosophy, sociology, education and organisational studies during the recent decades, but so far scarcely employed within theology. In part I, the volume unfolds key components of practice theory, especially as they have more recently been developed within sociological practice theories, reflect on their significance and potential with regard to theology. In part II, these perspectives are employed in the study of concrete religious practices - established as well as experimental religious practices, and collective as well as individual ones. By unfolding connections between theology and practice theories, and reflecting on practice theories' analytical and theoretical potential for theological study of religion, the book will be of interest for any scholar in the study of contemporary religion and practical theology.

Ecocritical Shakespeare Mar 25 2020 Can reading, writing about, and teaching Shakespeare contribute to the health of the planet? To what degree are Shakespeare's plays anthropocentric or ecocentric? What is the connection between the literary and the real when it comes to ecological conduct? This collection, engages with these pressing questions surrounding ecocritical Shakespeare, in order to provide a better understanding of where and how ecocritical readings should be situated. The volume combines multiple critical perspectives, juxtaposing historicism and presentism, as well as considering ecofeminism and pedagogy; and addresses such topics as early modern flora and fauna, and the neglected areas of early modern marine ecology and oceanography. Concluding with an assessment of the challenges-and necessities-of teaching Shakespeare ecocritically, *Ecocritical Shakespeare* not only broadens the implications of ecocriticism in early modern studies, but represents an important contribution to this growing field.

Transactions on Petri Nets and Other Models of Concurrency IV

Sep 30 2020 These Transactions publish archival papers in the broad

area of Petri nets and other models of concurrency, ranging from theoretical work to tool support and industrial applications. ToPNoC issues are published as LNCS volumes, and hence are widely distributed and indexed. This Journal has its own Editorial Board which selects papers based on a rigorous two-stage refereeing process. ToPNoC contains: Revised versions of a selection of the best papers from workshops and tutorials at the annual Petri net conferences; Special sections/issues within particular subareas (similar to those published in the Advances in Petri Nets series); Other papers invited for publication in ToPNoC; Papers submitted directly to ToPNoC by their authors. The fourth volume of ToPNoC contains revised and extended versions of a selection of the best papers from the workshops held at the 30th International Conference on Application and Theory of Petri Nets and Other Models of Concurrency and from the 10th Workshop and Tutorial on Practical Use of Coloured Petri Nets and the CPN Tools. The nine papers provide good coverage of a diverse range of topics including workflow systems, model checking, agent-based software systems, the state explosion problem, structure theory for Petri nets, and modal logics. 'The volume presents a good mixture of theory, tools, and practical applications related to concurrency and gives a useful snapshot of current research.

Hypoxia Nov 25 2022 The latest in a series of books from the International Hypoxia Symposia, this volume spans reviews on key topics in hypoxia, and abstracts from poster and oral presentations.

The biannual International Hypoxia Symposia are dedicated to hosting the best basic scientific and clinical minds to focus on the integrative and translational biology of hypoxia. Long before ‘translational medicine’ was a catchphrase, the founders of the International Hypoxia Symposia brought together basic scientists, clinicians and physiologists to live, eat, ski, innovate and collaborate in the Canadian Rockies. This collection of reviews and abstracts is divided into six sections, each covering new and important work relevant to a broad range of researchers interested in how humans adjust to hypoxia, whether on the top of Mt. Everest or in the pulmonary or cardiology clinic at low altitude. The sections include: Epigenetic Variations in Hypoxia High Altitude Adaptation Hypoxia and Sleep Hypoxia and the Brain Molecular Oxygen Sensing Physiological Responses to Hypoxia

Computers and Education in the 21st Century Dec 26 2022

ConieD is the biannual Congress on Computers in Education, organised by the Spanish Association for the Development of Computers in Education (ADIE). The last Congress, held in Puertollano (Ciudad Real), brought together researchers in different areas, ranging from web applications, educational environments, or Human-Computer Interaction to Artificial Intelligence in Education. The common leitmotiv of the major part of the lectures was the World Wide Web. In particular, the focus was on the real possibilities that this media presents in order to make the access of students to educational resources possible anywhere and anytime. This fact was highlighted in the Conclusions of the Congress following this Preface as the Introduction. From the full 92 papers presented to the Programme Committee we have selected the best 24 papers that we are presenting in this book. The selection of papers was a very difficult process, taking into account that the papers presented in the Congress (60) were all good enough to appear in this book. Only the restrictions of the extension of this book have limited the number of papers to 24. These papers represent the

current high-quality contributions of Spanish research groups in Computers in Education. Manuel Ortega José Bravo Rodríguez Editors xiii Introduction ConieD'99 (1st National Congress on Computers in Education) has brought together a very important group of Spanish and Latin American researchers devoted to studying the application and use of computers in education.

Hearings [Agriculture Dept.] Jan 15 2022

Towards Ubiquitous Learning Jan 27 2023 This book constitutes the refereed proceedings of the 6th European Conference on Technology Enhanced Learning, EC-TEL 2011, held in Palermo, Italy, in September 2010. The 30 revised full papers presented were carefully reviewed and selected from 158 submissions. The book also includes 12 short papers, 8 poster papers, and 2 invited paper. There are many interesting papers on topics such as web 2.0 and social media, recommender systems, learning analytics, collaborative learning, interoperability of tools, etc.

Encyclopedia of the History of Missouri Feb 22 2020

Exile through a Gendered Lens Feb 16 2022 This interdisciplinary anthology highlights exiled/alienated women in literature, history, and cinema. Contributors investigate when and how women from diverse backgrounds have been relegated to the margins in order to shed light on the state of alienhood that stems from gendered otherness.

The Era of the Martyrs Mar 05 2021 One of the most traumatic experiences of Late Antique Christians was the Great Persecution, begun by Emperor Diocletian and his Tetrarchic colleagues in 303 CE. Here Aaltje Hidding unites research of traditional memory studies with work done by cognitive scientists to examine how they remembered the Persecution. The resulting methodological framework, the 'cognitive ecology', systemically studies all what can be covered by this term - social surroundings, cognitive artefacts and the physical environment - and bridges the gap between individual and collective memory. The author analyses the remembrance of the Persecution in three different regions along the Nile river. In Oxyrhynchus, the thousands of papyrus fragments found at the city's rubbish dump give a vivid image of the martyrs in the daily lives of the Oxyrhynchites. In Antinoopolis, known for the cult of the physician saint Colluthus, she zooms in on the rituals and practices at a martyr's sanctuary. Finally, in Dandara, the rich hagiographical dossier of the anchorite Paphnutius shows how old memories of the Persecution became mixed with new monastic experiences. The Bohairic and Greek Passion of Paphnutius appear in their first complete English translations.

The Best Approximation Method An Introduction Feb 28 2023 The most commonly used numerical techniques in solving engineering and mathematical models are the Finite Element, Finite Difference, and Boundary Element Methods. As computer capabilities continue to improve in speed, memory size and access speed, and lower costs, the use of more accurate but computationally

expensive numerical techniques will become attractive to the practicing engineer. This book presents an introduction to a new approximation method based on a generalized Fourier series expansion of a linear operator equation. Because many engineering problems such as the multi dimensional Laplace and Poisson equations, the diffusion equation, and many integral equations are linear operator equations, this new approximation technique will be of interest to practicing engineers. Because a generalized Fourier series is used to develop the approximator, a "best approximation" is achieved in the "least-squares" sense; hence the name, the Best Approximation Method. This book guides the reader through several mathematics topics which are pertinent to the development of the theory employed by the Best Approximation Method. Working spaces such as metric spaces and Banach spaces are explained in readable terms. Integration theory in the Lebesgue sense is covered carefully. Because the generalized Fourier series utilizes Lebesgue integration concepts, the integration theory is covered through the topic of converging sequences of functions with respect to measure, in the mean (L_p), almost uniformly IV and almost everywhere. Generalized Fourier theory and linear operator theory are treated in Chapters 3 and 4.

SpaceTime of the Imperial May 07 2021 This volume works through spatio-temporal concepts to be found in imperial practices and their representations in a wide range of media. The individual cases investigated in the volume cover a broad spectrum of historical periods from ancient times up to the present. Well-known international scholars treat special cases of the topic, using cutting-edge theory and approaches stemming from historical, cartographic, religious, literary, media studies, as well as ethnography.

Metaharmonic Lattice Point Theory Apr 06 2021 Metaharmonic Lattice Point Theory covers interrelated methods and tools of spherically oriented geomathematics and periodically reflected analytic number theory. The book establishes multi-dimensional Euler and Poisson summation formulas corresponding to elliptic operators for the adaptive determination and calculation of formulas and identities of weighted lattice point numbers, in particular the non-uniform distribution of lattice points. The author explains how to obtain multi-dimensional generalizations of the Euler summation formula by interpreting classical Bernoulli polynomials as Green's functions and linking them to Zeta and Theta functions. To generate multi-dimensional Euler summation formulas on arbitrary lattices, the Helmholtz wave equation must be converted into an associated integral equation using Green's functions as bridging tools. After doing this, the weighted sums of functional values for a prescribed system of lattice points can be compared with the corresponding integral over the function. Exploring special function systems of Laplace and Helmholtz equations, this book focuses on the analytic theory of numbers in Euclidean spaces based on methods and procedures of mathematical physics. It shows how these fundamental techniques are used in geomathematical research areas, including gravitation, magnetism, and geothermal.

-8. *Letters to an unknown, tr. by Olive E. Palmer* Jun 27 2020

A Guide to the Pyrenees Oct 12 2021

U.S. Geological Survey Circular Jun 08 2021

Urban Fortunes Dec 14 2021 Property is central to any historical analyses of production, reproduction and consumption. It lies at the heart of discussions of material culture, class relations and the household economy. Recent work has begun to look beyond the acquisition and possession of goods to examine what the disposal, transmission and giving of property might tell us about changing society and culture. This landmark collection of articles represents a

wide range of approaches to and perspectives on the ownership, use and transmission of property in eighteenth and nineteenth-century towns. An introductory essay highlights the importance of property and inheritance in shaping social, cultural, economic and political structures and interactions within and between towns and cities. Writing from a variety of disciplinary backgrounds, the contributors then explore in detail the changing meaning of property to households and individuals; the social, economic and geographical contexts of inheritance practices; the geography of wealth; the role of gender in shaping property relations and, perhaps above all, the enduring link between property, the family and the household in urban contexts.
