This book presents the spatial and temporal dynamics of land use and land cover in the central Tibetan Plateau during the last two decades, based on various types of satellite data, long-term field investigation and GIS techniques. Further, it demonstrates how remote sensing can be used to map and characterize land use, land cover and their dynamic processes in mountainous regions, and to monitor and model relevant biophysical parameters. The Tibetan Plateau, the highest and largest plateau on the Earth and well known as “the roof of the world,” is a huge mountainous area on the Eurasian continent and covers millions of square kilometers, with an average elevation of over 4000 m. After providing an overview of the background and an introduction to land use and land cover change, the book analyzes the current land use status, dynamic changes and spatial distribution patterns of different land-use types in the study area,

using various types of remotely sensed data, digital elevation models and GIS spatial analysis methods to do so. In turn, it discusses the main driving forces, based on the main physical environment variables and socioeconomic data, and provides a future scenario analysis of land use change using a Markov chain model. Given its scope, it provides a valuable reference guide for researchers, scientists and graduate students working on environmental change in mountainous regions around the globe, and for practitioners working at government and non-government agencies. This is a collection of theses completed to fulfill B.S. requirements in the College of Engineering, University of Wisconsin from 1895 to 1962. This book fills a gap in the existing medical literature by providing a best-practice approach to the evaluation and acute treatment of patients presenting for emergency care with identifiable substance use and/or co-occurring psychiatric disorders. As the first interdisciplinary book to integrate psychiatric and emergency care, the text uniquely covers a myriad of serious medical conditions, acute mental status and dangerous behavioral abnormalities. The book focuses on guidelines that support emergency room physicians with little formal medical training in addiction medicine. The first section focuses on the diagnosis and management of substance-specific intoxication and withdrawal states, as well as common medical co-morbidities and disposition considerations. The book lends particular attention to the identification and stabilization of high risk medical conditions associated with each substance of abuse. The second section is psychiatrically focused, addressing the most common psychiatric symptoms and syndromes, their association with SUDs, an approach to differential diagnosis, and discussion of crucial treatment considerations for both safe ED management and post-ED disposition. A final section includes other pertinent topics, for example, the assessment of patient safety, responding to the medication-seeking patient, assessment and treatment of pregnant patients and working with adolescents and their families around substance use. Substance Use and The Acute Patient is a unique and valuable contribution to the literature for both consulting psychiatrists, emergency medicine specialists, addiction medicine specialists, and all other medical professionals who provide care for these most complex and underserved patients.
