Revision Notes in Intensive Care Medicine is a key resource for candidates preparing for postgraduate intensive care examinations. Mapped to the FFICM, EDIC and FCICM syllabuses, this title ensures candidates have all the information needed to prepare for their examinations. Information is presented in concise note form and bullet points with visually memorable tools, such as tables and diagrams, making revising and retaining key facts easier. Chapters are arranged into physiological systems, such as 'Respiratory Intensive Care' and 'Obstetric Intensive Care', and are subdivided into major clinical issues within each chapter so specific areas of further study can be found easily. Drawing from the authors' experiences as successful candidates, and carefully reviewed by consultants, Revision Notes in Intensive Care Medicine provides the foundation for postgraduate intensive care exam revision. Now in paperback, the second edition of the Oxford

Textbook of Critical Care is a comprehensive multi-disciplinary text covering all aspects of adult intensive care management. Uniquely this text takes a problem-orientated approach providing a key resource for daily clinical issues in the intensive care unit. The text is organized into short topics allowing readers to rapidly access authoritative information on specific clinical problems. Each topic refers to basic physiological principles and provides up-to-date treatment advice supported by references to the most vital literature. Where international differences exist in clinical practice, authors cover alternative views. Key messages summarise each topic in order to aid quick review and decision making. Edited and written by an international group of recognized experts from many disciplines, the second edition of the Oxford Textbook of Critical Care provides an up-to-date reference that is relevant for intensive care units and emergency departments globally. This volume is the definitive text for all health care providers, including physicians, nurses, respiratory therapists, and other allied health professionals who take care of critically ill patients. He shows that these perspectives depart from the formal principles of medical ethics. He argues that courts and hospital administrators, with their new insistence on taking the rights of patients seriously, have reshaped the way life and death decisions are made. At the same time, Zussman examines doctors' frequent resistance to the precepts of medical ethics: doctors, he shows, often override patients' wishes, justifying their decisions in the name of the patients' best interests while maintaining control over the decision-making process. The tools and clinical uses of the BLUE protocol, which allows diagnosis of most cases of acute respiratory failure, are first described in detail. Careful attention is then devoted to protocols derived from the BLUE protocol - the FALLS protocol for diagnosis and management of acute circulatory failure, the Pink protocol for use in ARDS, and the SESAME protocol for use in cardiac arrest - and to the LUCI-FLR program, a means of answering clinical questions while reducing radiation exposure. Finally, the book discusses all the possible settings in which lung ultrasound can be used, discipline by discipline and condition by condition. Lung Ultrasound in the Critically Ill comprehensively explains how ultrasound can become the stethoscope of modern medicine. It is a superb complement to the author's previous book, Whole Body Ultrasonography in the Critically Ill. This title presents key studies that have shaped the practice of critical care medicine. Selected using a rigorous methodology, the studies cover topics including: sedation and analgesia, resuscitation, shock, ARDS, nutrition, renal failure, trauma, infection, diabetes, and physical therapy Are you looking for a Memorable Nurse Gift? Over the past few decades we have seen an enormous growth in the number of intensive care units (ICU) across the world. Indeed, it is estimated that a large proportion of health care expenses are devoted to patients in these specialized units. Medical students, residents, fellows, attending physicians, critical care nurses, pharmacists, respiratory therapists, and other health-care providers (irrespective of their ultimate field of practice) will spend several months or years of their professional lives taking care of critically ill or severely injured patients. These clinicians must have special training, experience, and competence in managing complex problems in their patients. Moreover, these clinicians must interpret data obtained by many kinds of monitoring devices, and they must integrate

this information with their knowledge of the pathophysiology of disease. Even more important is the fact that anyone working in an ICU or with a critically ill patient must approach patients with a multidisciplinary team. The phrase there is no I in TEAM comes to mind. An essential reference text, the fifth edition of this popular book details drugs in anaesthesia and intensive care in an A-Z format. The book describes the pharmacokinetics and pharmacodynamics of all the drugs commonly used by anaesthetists. The A-Z organisation allows rapid access to specific information on the properties and characteristics of almost 200 drugs. The new edition includes a complete revision of all the featured drugs, and the addition of key new drugs. New diagrams of particular drug structures and comparison tables aid comparison of differences within a drug class for exam revision. Improved navigation in the index enables prompt discoverability of information. Written in a concise, bullet-point style to allow quick access to information, the book contains all necessary drug references for anaesthetists in training, consultant anaesthetists, intensive care nurses, and anaesthetic assistants. A practical A-Z pocket manual that explains how to use drugs safely and effectively in an intensive care setting. Anesthesiology Critical Care Board Review fills a much-needed niche, not only in improving board examination test-taking skills but also as a tool for educating critical care physicians, anesthesiology practitioners, and advanced practice providers with the most relevant, up-to-date, state of the art considerations in critical care medicine. Content is specifically designed to prepare Anesthesiology and Emergency Medicine critical care fellows for the American Board of Anesthesiology Critical Care Medicine Certification Examination. The book offers diagnostic and therapeutic management considerations, divided into sections on technical aspects of critical care and organ systems, in a question-and answer format with clear, concise explanations and targeted references for each question. John F. Murray, for many years Chief of the Pulmonary and Critical Care Division of the hospital and a Professor at the University of California, San Francisco, takes readers on his daily ward rounds, introducing them to the desperately ill patients he treats as well as to the young physicians and medical students who accompany him. Writing with compassion and knowledge accumulated over a long career, Murray presents the true stories of patients who show up with myriad disorders: asthma, cardiac failure, gastrointestinal diseases, complications due to AIDS, the effects of drug and alcohol abuse, emphysema. Readers will come away from this book with a comprehensive understanding of what an ICU is, what it does, who gets admitted, and how doctors and nurses make decisions concerning life-threatening medical problems. Intensive care for critically ill patients is a new but well-established and growing branch of medicine. Estimates suggest that 15 to 20 percent of all hospitalized patients in the United States are treated in an intensive or coronary care unit during each hospital stay, so there is a real possibility that the reader will either be admitted to an ICU himself or herself or knows someone who will be. Murray not only offers a real-time account of the diagnosis, treatment, and progress of his patients over the course of one month but also conveys a wealth of information about various diseases and medical

procedures in succinct and easy-to-understand terms. In addition, he elaborates on ethical dilemmas that he confronts on an almost daily basis: the extent of patient autonomy, the denial of ICU care, the withdrawal of life support, and physician-assisted suicide. Murray concludes that ICUs are doing their job, but they could be even better, cheaper, and--most important--more humane. His chronicle brings substance to a world known to most of us only through the fiction of television. Are you looking for a Memorable Gift? This text is aimed at defining the current concepts that define trauma induced coagulopathy by critically analyzing the most up-to-date studies from a clinical and basic science perspective. It will serve as a reference source for any clinician interested in reviewing the pathophysiology, diagnosis, and management of the coagulopathic trauma patient, and the data that supports it. By meticulously describing the methodology of most traditional as well as state of the art coagulation assays the reader will have full understanding of the tests that are used to study trauma induced coagulopathy. The evolving use of blood products as well as recently introduced hemostatic medications are reviewed in detail. Trauma Induced Coagulopathy will also be a valuable source for quick reference to the clinician that is faced with specific clinical challenges when managing coagulopathy. Presents a bibliography of articles on critical and intensive care, compiled from the electronic version of the "British Medical Journal" (BMJ), a publication of BMJ Publishing Group. Notes the title, author, and publication date for each article. Provides access to abstracts and full text of editorials, clinical reviews, and similar articles. Links to the BMJ home page.
