Use of Services for Family Planning and Infertility, United States, 1982 Jul 29 2020 The 1982 statistics on the use of family planning and infertility services presented in this report are preliminary results from Cycle III of the National Survey of Family Growth (NSFG), conducted by the National Center for Health Statistics. Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15-44. A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received. Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date. Overall, 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years. There were no statistically significant differences between white (79%), black (75%) or Hispanic (77%) wives, or between the 2 income groups. The 1982 survey questions were more comprehensive than those of earlier cycles of the survey. The annual rate of visits for family planning services in 1982 was 1077 visits /1000 women. Teenagers had the highest annual visit rate (1581/1000) of any age group for all sources of family planning services combined. Visit rates declined sharply with age from 1447 at ages 15-24 to 479 at ages 35-44. Similar declines with age also were found in the visit rates for white and black women separately. Nevertheless, the annual visit rate for black women (1334/1000) was significantly higher than that for white women (1033). The highest overall visit rate was for black women 15-19 years of age (1867/1000). Nearly 2/3 of all family planning visits were to private medical sources. Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources, as did black women age 15-24. White women age 20 and older had higher visit rates to private medical services than to clinics. Never married women had higher visit rates to clinics than currently or formerly married women. Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term. About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview. During the 3 years before interview, about 1.9 million women had infertility visits. For all ever married women, as well as for white and black women separately, infertility services were more likely to be secured from private medical sources than from clinics. The survey design, reliability of the estimates and the terms used are explained in the technical notes.

A Reference Guide to English, American and Canadian Literature Jun 08 2021 To anyone who has crossed the Canadian prairies, the title of this book, *Vertical Man/Horizontal World*, will strike a responsive chord -- man stands alone in seemingly limitless landscape "as empty as nightmare". The stark isolation of man against the prairie's landscape is "so obvious" the author says, "that except for passing comments [in two studies of Canadian prairie fiction] no one has made a sustained analysis of the use of the prairie in Canadian fiction, or argued at any length for what most immediately unifies the literature of the prairie region." Author Ricou argues that man is intimidated by the vastness which so surrounds him, and "he will almost certainly wish to meet the challenge of this land, to say 'Look, look!' in whatever way he can, by raising a crop or a monument, by interpreting his experience in paint or words." Ricou traces this recurrent theme in prairie fiction from writers such as Frederick Philip Grove and Wallace Stegner, Edward McCourt and W.O. Mitchell, to Margaret Laurence and Robert Kroetsch. In tracing the relationship of man and land from the earliest writers of prairie fiction to the most recent, Ricou shows how the calm and benign relationship of man and land as exemplified, for instance, in the fiction of Robert Stead and W.O. Mitchell has changed in recent novels to a more dramatic confrontation. "[The novelists] find in [the landscape] an ideal mirror for the dilemma (and often the strength) of existential man." Critic Henry Keisel once wrote: "To conquer a piece of the continent, to put one's imprint upon virgin land, to say 'Here I am, for that I came', is as much a way of proving one's existence, as is Descartes' 'cogito, ergo sum.'" *Vertical Man/Horizontal World* is an affirmation of Keisel's statement. Slowly and cumulatively Ricou traces the image of man leaving his mark on the empty, sometimes nightmarish land of the Canadian prairie. "How do we fit our time and our place?" is a question posed by all the writers Ricou examines. "The answer," he says, "at this point in the evolution of Canadian prairie fiction, delivered with conviction . . . is: abruptly and uneasily, but brazenly and delightedly." This book is a sustained and penetrating look at the interrelationship of man and landscape in Canadian prairie fiction.

Net Positive Suction Head for Rotodynamic Pumps: A Reference Guide May 19 2022 Cavitation, the result of insufficient pressure in a pump inlet, is not only the major cause of loss in pump performance, but also of reduced cost effectiveness. This practical guide provides straight forward, up to the minute advice on all aspects of cavitation and NPSH, enabling the end user to improve all the factors involved. Prepared by Europump -

European Association of Pump Manufacturers - this book contains the results of years of research work and practical experience by leading European educational institutions and pump manufacturers to give a valuable unbiased guide which is applicable to all types of rotodynamic pumps and related systems.
