Neuralgia and Kindred Diseases of the Nervous System Aug 08 2021

Natural Causes Mar 27 2023 From the celebrated author of *Nickel and Dimed*, Barbara Ehrenreich explores how we are killing ourselves to live longer, not better. A razor-sharp polemic which offers an entirely new understanding of our bodies, ourselves, and our place in the universe, *Natural Causes* describes how we over-prepare and worry way too much about what is inevitable. One by one, Ehrenreich topples the shibboleths that guide our attempts to live a long, healthy life -- from the importance of preventive medical screenings to the concepts of wellness and mindfulness, from dietary fads to fitness culture. But *Natural Causes* goes deeper -- into the fundamental unreliability of our bodies and even our "mind-bodies," to use the fashionable term. Starting with the mysterious and seldom-acknowledged tendency of our own immune cells to promote deadly cancers, Ehrenreich looks into the cellular basis of aging, and shows how little control we actually have over it. We tend to believe we have agency over our bodies, our minds, and even over the manner of our deaths. But the latest science shows that the microscopic subunits of our bodies make their own "decisions," and not always in our favor. We may buy expensive anti-aging products or cosmetic surgery, get preventive screenings and eat more kale, or throw ourselves into meditation and spirituality. But all these things offer only the illusion of control. How to live well, even joyously, while accepting our mortality -- that is the vitally important philosophical challenge of this book. Drawing on varied sources, from personal experience and sociological trends to pop culture and current scientific literature, *Natural Causes* examines the ways in which we obsess over death, our bodies, and our health. Both funny and caustic, Ehrenreich then

tackles the seemingly unsolvable problem of how we might better prepare ourselves for the end -- while still reveling in the lives that remain to us.

Causes and Consequences Feb 26 2023

Mental Retardation; Nature, Cause, and Management May 17 2022 The new edition of what has been an important book in the field of mental retardation revisits the major issues affecting individuals with mental retardation, those personally responsible for their education and well being, and society-at-large. This authoritative text provides up-to-date material on the major dimensions of the disorder -- its nature, its causes, and its treatment or management.

Observations on the Nature, Causes, and Cure of those Disorders which have been commonly called Nervous Hypochondriac, or Hysteria, to which are prefixed some remarks on the sympathy of the nerves Jul 19 2022

Dispositions and Causes May 05 2021 In recent decades, the analysis of causal relations has become a topic of central importance in analytic philosophy. More recently, dispositional properties have also become objects of intense study. Both of these phenomena appear to be intimately related to counterfactual conditionals and other modal phenomena such as objective chance, but little work has been done to directly relate them. *Dispositions and Causes* contains ten essays by scholars working in both metaphysics and in philosophy of science, examining the relation between dispositional and causal concepts. Particular issues discussed include the possibility of reducing dispositions to causes, and vice versa; the possibility of a nominalist theory of causal powers; the attempt to reduce all metaphysical necessity to dispositional properties; the relationship between dispositions, causes, and laws of nature; the role of causal capacities in explaining the success of scientific inquiry; the grounding of dispositions and causes in objective chances; and the type of causal power required for free agency. The introductory chapter contains a detailed overview of recent work in the area, providing a helpful entry to the literature for non-

specialists.

Bacchus. An essay on the nature, causes, effects, and cure of Intemperance. Second Thousand Jul 27 2020

Human Diversity May 25 2020 ' Human diversity, with its myriad of different conditions involving biology, psychology, and social structures, remains one of the biggest challenges — and opportunities — facing the species. With many government and private firms now having diversity or equality officers, programmes or committees, it is clear that human diversity is a cornerstone of policy-making at the very highest echelons. All this points to a need for proper scientific and medical information on this topic — not soft "politically correct" sociology. This book provides the hard facts on human similarities and differences, their causes and effects on people. It covers the whole range from normal to extreme human types, and presents — for the first time — much of the author's 25 years of original research on the subject. It can also act as a family medical guide to aspects of human function, structure and disease. It covers many human topics in a humane and understandable fashion, providing much material for information and discussion. It can be used as a handbook or textbook on human diversity, but is mainly popular science for the general public. A special feature of this book is the 140 colour photos that illustrate the diversity of human life, nearly all taken by the author himself. Given the vast nature of the subject, the book seamlessly integrates relevant data from multiple disciplines including medicine, biology, anthropology, genetics, psychology, evolution, languages, sociology, history and geography. Even controversial subjects such as race, class and culture are tackled head-on with no-nonsense scientific rigour.

Contents: Introduction: Scope of the Book, Types of Human Difference and Their Causes Races and Inter-Mixing, Nationalities, Cultures, Castes, Classes and Religions Height, Weight, Shape and Obesity Differences Between Males and Females; Reproduction and Its Production of Genetic Diversity Personal Choice, Cosmetic and

Preventative Surgery, Clothing and Make-Up Languages — A Rich but Frustrating Diversity Names and Identity Albinos, Colour Blindness and Height: How Human Characteristics are Inherited The Brain, Intelligence, Mind, Personality, Mental Problems, Learning, Memory, Creativity, Happiness Sex, Attraction, Reproduction, Twins, Incest Diseases, Disorders, Immunity, Cancer Eating, Drinking, Diet, Digestion, Liver, Cystic Fibrosis, Diabetes, Allergies, Food Intolerances, Anorexia Skin, Skin Colour and Disorders The Skeleton, Muscles, Osteoporosis, ME, Motor Neurone Disease, Muscular Dystrophy Head, Face, Eyes, Ears, Sight, Hearing, Smell, Taste The Heart; Heart Attacks, Strokes, High Blood Pressure Blood, Blood Groups; Anaemia, Haemophilia, Leukaemia and Other Blood Disorders Arms, Legs, Giants, Dwarfs, Arthritis, Left-Handedness Kidneys, Urine, Bladder, Cystitis, Police Alcohol Tests Lungs, Breathing, Asthma Development From the Fertilised Egg; Sexual and Later Development Longevity, Ageing, Birth and Death Rates, Immigration, Population Structure Abnormalities of Sex Chromosomes and Autosomes, Down Syndrome, Barr Bodies Opinions on the Characteristics of the Chinese, Japanese and English Readership: Students of medicine, biology, psychology and sociology, professionals working as diversity officers or in equalities, general readership. Key Features: This book is the only one on human diversity and its effects on people The book contains several personal accounts, specifically written for it, by people who are different in some way. They give details of their difference and how it has affected them and those around them, e.g., having cystic fibrosis, suffering from suicidal depression, having a heart attack requiring a quadruple by-pass, having type 1 diabetes while being pregnant, or being "severely dyslexic" Controversial subjects such as race, class and culture are tackled head-on with no-nonsense scientific rigour The author is a very experienced and highly qualified scientist with medical interests who has researched this topic for 25 years. Many of his original findings on human diversity

are published in this book for the first time. As a geneticist, he is able to write authoritatively on which human differences are genetic, which are environmental, and how genetics and environment interact for many

characteristics
Keywords: Human; Diversity; Genetics; Environment; Health; D

“Really enjoyed reading your chapter which brings alive the brain!

As I said, very gripping!” Dr Annabelle Dudley Consultant

Apr 28 2023

War: Its Nature, Cause and Cure Jun 06 2021 First published in 1923, this book examines the causes and evils of War. Being published soon after the First World War, this becomes the basis for much of the volume's experience. The author G. Lowes Dickinson argues that war and civilisation are incompatible and that the pursuit of war will end in the destruction of mankind.

Natural Causes Oct 10 2021 This work shows how the policies and imperatives of business and government influence - and are influenced by - environment and social change. It examines the power of ecological Marxist analysis for grounding economic behaviour in the real world and for formulating political strategies.

An Inquiry Into the Nature and Causes of the Wealth of Nations, Vol. 2 (Classic Reprint) Oct 30 2020 Excerpt from An Inquiry Into the Nature and Causes of the Wealth of Nations, Vol. 2 Of the Difeouragement of Agriculture in the ancient State of Europe, after the Fall of the Roman Empire.
